Wallet activity report

Wallet 0xF4DFDD6407a63A36bD26af92b593E7fdC913A989 on Pharos mainnet (chain 1672)

Period 2026-11-01 00:00 to 2026-11-09 23:59 (UTC). Opening state after block 21807389 (2026-10-31 23:59:59), closing state after block 22606123 (2026-11-09 23:59:59).

Summary

Wallet 0xF4DFDD6407a63A36bD26af92b593E7fdC913A989, from 2026-11-01 00:00 to 2026-11-09 23:59 (UTC): Pharos blocks 21807390 to 22606123.

Nothing touched this wallet in the period.

The books do NOT fully tie: 3 of 19 assets have a gap between what the transactions explain and the closing balance on chain (see "Does it add up").

Worth a second look

Why	Link
variableDebtUSDC doesn't tie: it looks like a lending debt token, and what the wallet owes grew by 0.003612 variableDebtUSDC with no transaction, which is how borrow interest shows up.	variableDebtUSDC
bUSDC doesn't tie: the closing balance is higher than the transactions explain by 0.002738 bUSDC. Something moved it without a transfer the explorer lists (interest, a rebase, or a missed transaction).	bUSDC
bWPHRS doesn't tie: the closing balance is higher than the transactions explain by 0.000009390004893885 bWPHRS. Something moved it without a transfer the explorer lists (interest, a rebase, or a missed transaction).	bWPHRS

How this was put together

The explorer (socialscan) is only an index of which transactions touched the wallet. Token amounts and gas come from each transaction's receipt, native PROS from the transaction value and internal calls. Balances are read with eth_getBalance and balanceOf at blocks 21807389 and 22606123 on Pharos RPC.

Generated 2026-11-10T19:43:57Z by tieout. Fingerprint of the data: ce5b80b241678baf (same wallet and period give the same fingerprint).
